

HUMAN REPRODUCTIVE TISSUE STORAGE

Keeping Hopes Alive

YOUR FUTURE. SECURED.

Fertility Preservation is used by patients concerned about their future fertility. Fertility can be affected by a number of different factors, including disease, lifestyle, career, or age. The ability to preserve reproductive tissues is an important option and is often recommended by doctors for cancer patients, military personnel, high-impact athletes, and transgender clients. Cryopreservation and cryostorage have advanced in the last several years and give patients the chance to have biological children—an option that is priceless.

At ReproTech, we've been at the forefront of human reproductive tissue storage for over 30 years. It's all we do, and all we've ever done. We provide the safest, most cost effective storage for reproductive tissues. We literally wrote the best practices handbook on safe storage and continue to lead the industry today.

THE SAFEST PLACE ON EARTH TO STORE YOUR HOPES

When you trust ReproTech for the safekeeping of your reproductive future, you are counting on a team that is continually improving their processes. ReproTech has surpassed every industry standard in ensuring the safety of your reproductive tissue. Our state-of-the-art shipping, handling, storage and monitoring protocols combine the best of technology with the human touch only 30 years of experience can bring.

The **Nevada** facility features a fire-safe storage room capable of withstanding temperatures up to 1200° for up to 3 hours.

The **Minnesota** facility features a DuPont™ StormRoom™ capable of withstanding an F5 tornado.

The **Texas** facility features a DuPont™ StormRoom™ capable of withstanding an F5 tornado.

The **Connecticut** facility's storm room safeguards against Nor'easter, hurricane and tropical storm winds.

The **Florida** facility features Category 5 hurricane-proof storm rooms.

Multi-Layer Monitoring

ReproTech's Multi-Layer Monitoring uses redundant systems for storage tank monitoring, notifications and information management, including:

- Cloud-based system of internal tank temperature sensors capable of detecting variations as slight as .01 degrees Celsius.
- External tank temperature monitoring sensors.
- Liquid nitrogen level sensors inside each tank, which are on a completely different system over a completely different communication line.
- Frequent measuring of nitrogen liquid levels with net evaporation rate (NER) tracking and predictive analysis.
- Weekly testing of alert call-out systems to ensure functionality.
- Our tanks continue operating in a power outage since they don't rely on electricity to maintain temps.
- Storage tank rooms are live video monitored 24/7.

Safe Shipping That Goes Beyond Industry Standards

Our shipping tanks are:

- Traced continually during shipment with UPS Premier Healthcare
- Shipped in enclosures with proprietary security features
- Inspected before and after each shipment
- Tested annually and validated to hold correct temperatures

Potentially Infectious Specimen Storage.

We provide separate shipping and storage tanks for patients who have not been tested or who have tested positive for sexually transmitted diseases such as HIV, hepatitis B, hepatitis C, HTLV 1 & 2, syphilis or other communicable diseases.

Trained and Experienced Staff who understand the fertility journey of patients. We regularly work with fertility clinic staff to support patients' needs.
